

Simx Smart Sense 180° PIR Motion Sensor

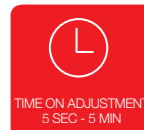

Provides automatic movement sensor control for new or existing lighting. Time on, detection area, range and the level of light at which the unit becomes operational are all easily adjustable by the user.

The manual override facility allows the lighting to stay on, overriding the PIR function.

Large accessible wiring box and "hanger". Vertical PIR head adjustment coupled with a lens masking capability allows the detection range of the sensor to be reduced to suit any application.

- Proven and Reliable
- Large 2kW switching capacity
- Double pulse manual override
- Large accessible wiring cavity
- Wall and ceiling mount

3 YEAR
